DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 9-23, drawn to a nucleic acid, plasmid, host cell and method of use, classified in class 435, subclass 69.7.
- II. Claims 7 and 8, drawn to a fusion polypeptide, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are structurally unrelated and distinct as claimed. Inventions I and II are independent and distinct because the different inventions of the nucleic acid and proteins have different chemical structures (carbohydrate versus amino acid) and the nucleic acid is not required to produce the fusion polypeptide, since the fusion polypeptide can be synthesized chemically. The different chemical structures perform different functions and are made by different methods. Further, due to the different chemical structure the searches of the groups are not coextensive.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1645

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
